

Lightning Protection

Lightning threatens much more than property when lightning is nearby, consider these tips.

- **Things You Can Do To Protect Yourself**
 - Do not use the telephone except in an emergency
 - Stay away from electrical appliances, TV's, fireplaces, metal objects, windows or doors
 - Seek shelter immediately in an enclosed building or vehicle
 - Avoid isolated trees, high ground, bodies of water or large open areas
- **What does a lightning Protection System Do?**
 - Lightning protection system has two objections
 - Provide a direct path for the lightning to follow to the ground
 - Prevent destruction, damage, injury or death as it travels that path
 - It is important to note that a lightning protection system does not attract lightning. It also cannot prevent a lightning strike. A lightning protection system does provide a safe path to ground for the electric current.
